

Welcome to our public consultation

Thank you for taking the time to attend our consultation event. RES and The Renewables Infrastructure Group (TRIG) are seeking your views on the layout and design for a wind farm repowering proposal that we are exploring at the existing Altahullion I & II Wind Farm, located in the townlands of Drum & Glenconway, 3km north of Foreglen in Derry/Londonderry.

RES and TRIG believe in meaningful and effective consultation, and we aim to engage with the local community and key stakeholders in order to facilitate constructive consultation. This helps to identify issues and concerns, as well as benefits and opportunities, which we will consider when refining the design and delivery of proposal.

This exhibition forms part of our pre-application consultation. We have provided a range of information on the repower proposal, including details of the site location, design layout, proposed infrastructure, site constraints, likely turbine delivery route, and environmental considerations.

In addition, we have provided visualisations comprising of wirelines and photomontages to help give an impression of how the repower site may appear from different viewpoints in comparison to the existing wind farm.

The Altahullion Wind Farm repowering proposal has been determined as Regionally Significant and as such the planning application will be made to the Department for Infrastructure (DfI) with Causeway Coast and Glens Borough Council as a statutory consultee.

Please take the time to read the information provided and talk to our project team about any questions that you may have.

All consultation feedback submitted to us will be reviewed by the project team over the coming weeks as we continue the design process.

We consider pre-application consultation a crucial part of the wind farm development process.

This exhibition is designed to give you the opportunity to:

- Learn more about the repowering proposal
- Discuss any questions or views with our project team
- Provide written feedback to us on the proposal
- See examples of how turbine blades may be repurposed
